MOSQUITO CONTROL
HELPFUL INFORMATION

Please follow all mosquito control residential flyer information to assist in keeping mosquitoes & their diseases away from you, your family, and our County.

If you have any questions, please call 386-329-0397.

The County's Mosquito Services Contractor, VDCI, is working on ULV spraying in those areas that have been verified for State justified spraying.

Please keep in mind that:

- **The Department does not routinely engage in spraying on private property or non-County maintained roads.**
- **Spraying cannot be done when it is raining.**
- **Spraying cannot be done when the wind is blowing more than 10 MPH.**
- **Spraying cannot be done in temperatures below 60 degrees.**
- **We can no longer spray on complaints alone. The State requires one or more of the following additional verification methods in addition to complaints:**

***trap counts (Mosquito traps set overnight for count & species identification to meet State requirements – 12+ hour process)**

***landing rate counts (Certified technician to observe & record landing rate data to meet State requirements)**

***positive sentinel chicken (State laboratory testing & reporting of sentinel chicken blood samples submitted)**

Note: If a "Bee Keeper", "Organic Grove", or a "Fish Hatchery" wishes to restrict spraying, they MUST be registered with the State and call 386-329-0397 and provide their State registered number and request being put on a courtesy list.
